Mary Amiel Riva U. Catado

Software Developer & AI Automation Specialist

Cebu City, Philippines • +63 908 554 2380 • maryamielcatado@gmail.com • LinkedIn • GitHub • Portfolio

PROFESSIONAL SUMMARY

Software developer and AI automation builder. Builds AI-assisted workflows, business applications and reporting that replace manual, spreadsheet-driven work across CRM operations, sales, finance, logistics, healthcare research and government services. Hands-on with n8n, Make.com, HubSpot, RAG pipelines, computer vision and LLM tools, and leads AI enablement for a 16-person team. Takes a process from requirements to a deployed system, then documents it and hands it over.

EXPERIENCE

AI Automation Specialist — Realm Nexus Corporation (Remote) **Aug 2026 – Present**

- Built and tested a Make.com scenario that emails a weekly digest of all 67 active leads, ranked by priority, in under 10 seconds per run. It's designed to cut weekly lead review from ~67 to ~5 minutes, worth about US$2.1K/year in staff time (est.).
- Set up a Notion CRM workspace for the Finance and Acquisition teams to track leads and follow-ups while the company's lending platform is in development, replacing shared spreadsheets.

AI Automation & Workflow Integration Specialist — Rising Star Solutions (Remote) **Aug 2026 – Present**

- Lead AI enablement for the 16-person team: configuring Claude and ChatGPT for each person's workflow and coaching them on writing better prompts and giving the model the right context.
- Audited the company website for cookie-consent and WCAG accessibility gaps, flagged them to the lead developer, and built the code changes to fix the accessibility issues.

Freelance Software Developer & AI Automation Specialist (Remote) **Mar 2026 – Present**

- Cleaned up HubSpot data for a US diagnostics company: Python lead-source matching suggested a source for 302 of 324 untagged leads (93%), leaving 22 for manual review.
- Traced 395 duplicates and existing contacts in a 493-entry campaign list before import, so only 98 genuinely new contacts entered the CRM.
- Built a live HubSpot workflow that syncs company addresses to contacts, plus a daily dashboard of deals and sales activity for the sales team.
- Designed a six-module ERP prototype for a Cebu egg-trading business, covering inventory, BIR-compliant invoicing, logistics, HR/payroll and accounting, on React, Vite and Supabase/PostgreSQL with role-based access control.

Full Stack Engineer Intern (TEEP Research Program) — Wise Laboratory, STUST, Tainan, Taiwan **Oct 2025 – Mar 2026**

- Built SpoonFull end-to-end with a team of three: an AI dietary monitoring system now in daily use at a long-term care facility in Chiayi. Worked across branding, the Angular web app, Django backend, MySQL data model, YOLO food segmentation on a Jetson edge device, RAG-based nutrition recommendations, the Tauri station app and deployment.
- Cut per-resident intake recording from about 15 minutes by hand to under 10 seconds, with a multi-dish meal processed on the device in under 4 seconds. For a typical facility, that's about US$23K/year in net staff-time savings (est.).
- Wrote the annotation guidelines and system specifications used to label the 250-image training set and guide ongoing development.
- 2nd Place, International Category, 21st DSP Creative Design Contest, Taiwan Ministry of Education: 2nd of 25 finalists from 193 teams. Paper accepted at ICBET 2026.

Software Developer Intern — Concreat Holdings Philippines, Inc. **Jan 2025 – Jun 2025**

- Proposed and prototyped a rewards and loyalty platform, then kept updating it after the internship. The proposal was approved and the prototype hosted for stakeholder review.
- Built a Leaflet-based store geolocator for Concreat staff to manage partner stores: search by name or address, filter by store type, and open any store's Google Maps listing for directions.

QA Engineer Intern — Raykan Technologies **Feb 2024 – Jun 2024**

- Wrote Cypress end-to-end test suites for the customer and employee portals of a US logistics platform, from login through sales, warehousing and accounting, and handed them over with HTML failure reports and an SOP co-written with the QA team.

System Integrator — Cylix Technologies **Jan 2022 – Mar 2022**

- Led development of a One-Stop-Shop system for business registration, tax and related services in two city LGUs, still in use today. Applicants are processed in one area instead of visiting each office, paper forms become online records, and approvals that need another department's sign-off first now move through the system.
- Deployed the system to production, ran user acceptance testing with LGU staff to catch issues before launch, and trained 60+ staff across 4 departments to use it in daily work.

PROJECTS

Paagi: AI Packaging Optimization — built with Angular, Django, object detection · Champion, SCS Days 2025 Hackathon, 1st of 38 teams

- Designed a box-sizing approach that picks each box from the item's dimensions. In a simulation on 1,000 items, it cut empty box space by 72% and cardboard use by 42%. At PHLPost domestic rates, that's about ₱1M (~US$18K) less postage per 1,000 parcels (est.).
- Built the working demo, from product photo to object detection to packaging recommendation. Invited by Gothong Southern's CTO to present it to their IT and R&D teams, the only team member invited.

GabAI: AI Attention-Screening App — built with scikit-learn, Django, Ionic/Angular, Firebase, LLM integration

- Trained three Random Forest classifiers that predict attention-risk levels from 8 short onboarding questions mapped to SNAP-IV, a standard attention rating scale. Predictions are served from a Django endpoint and personalize in-app nudges and a parent chat assistant. Reviewed by a licensed psychometrician.

Portfolio Terminal Agent — built with n8n, React, Vercel, Claude Code

- Built an AI assistant into my portfolio's retro terminal: an n8n RAG agent answers visitors' questions about my work, reached through a Vercel serverless function that keeps its credentials off the browser.
- Added built-in answers for 20 common question topics, so the terminal responds instantly and keeps working even when the agent is unavailable.

Event RSVP Automation — built with JavaScript, Supabase, Google Apps Script, Google Sheets

- Built a mobile RSVP site for a 71-guest event, plus a live Google Sheets dashboard: Apps Script pulls replies from Supabase into head count, response rate, guesses and a list of who hasn't replied. Replaced about 2 hours of manual tallying (est.); used live by the hosts.

EDUCATION

University of San Jose-Recoletos — Cebu City **June 2026**

Bachelor of Science in Computer Science, triple major in AI, Web & Mobile Application Development

- First student in the School of Computer Studies to complete the triple major · 3× Dean's Lister
- Special Jury's Prize, iPBL 2025, Osaka Institute of Technology: gate driver circuit and control software for a photovoltaic system; volunteer English–Japanese translator for the team
- Co-author, 2 conference papers: ICBET 2026 (Bali) and VTCA 2026 (Miyazaki)

TECHNICAL SKILLS

AI & LLM: Claude, ChatGPT, Claude Code, RAG pipelines, LLM integration, prompt engineering, Pinecone, Qdrant

Automation & CRM: n8n, Make.com, HubSpot workflows and reporting, Notion, Google Apps Script, REST APIs, webhooks

Machine Learning & Data: computer vision (YOLO), scikit-learn, recommender systems, pandas, Selenium

Development: Python, JavaScript, TypeScript, SQL, React, Angular, Ionic, Django, Tauri, Supabase/PostgreSQL, MySQL, Firebase, Leaflet, Git

Delivery: Cypress, UAT, WCAG, Agile/Scrum, requirements analysis, workflow mapping, technical documentation

CERTIFICATIONS

HubSpot Sales Hub Software — HubSpot, 2026 • N8N101 and QS101 — n8n, 2026 • Make Foundation — Make.com, 2026 • Career Essentials in Generative AI — Microsoft, 2026 • Data Analyst in Python — DataCamp, 2024
